

AS-IS Process Analysis – Sathsarani Ranasingha

1 Current State Overview

The current meeting management process in technology companies is largely manual and fragmented. Meetings are conducted without a standardized system for capturing outcomes, tracking action items, or measuring effectiveness. The following analysis documents the current state (AS-IS) workflow.

2 Current Meeting Workflow

#	Step	Description	Problem
1	Meeting scheduled	Team lead sends calendar invite via email or Teams	No agenda template, unclear objectives
2	Meeting held	Participants discuss topics verbally or via screen share	No structured format, frequent scope creep
3	Notes taken manually	One participant manually types notes in Notepad, Word, or Notion	Inconsistent format, key points missed
4	Minutes distributed	Notes emailed or posted to Slack after meeting ends	Delayed, often forgotten, no standard format
5	Action items tracked	Items written informally in chat or notes with no owner/deadline	No accountability system, items get lost
6	Follow-up	Manager manually follows up verbally in next meeting	Inconsistent, relies on human memory

AS-IS Process Analysis – Sathsarani Ranasingha

3 Key Pain Points Identified

The following pain points were identified through analysis of typical tech company meeting workflows:

Pain Point	Severity	Business Impact
No action item tracking system	High	Tasks missed, deadlines slipped, project delays
Manual meeting minutes	Medium	2–3 hours per week lost per team member
No meeting quality measurement	High	Management blind to team inefficiencies
Recurring unresolved issues	High	Same problems repeated, team frustration increases
No cross-team visibility	Medium	Leadership cannot compare team productivity
Inconsistent note formats	Low	Confusion about what was decided, audit difficulty
