

Gap Analysis – Sathsarani Ranasingha

1 Current vs Required Capabilities

Capability	Current State	Required State	Gap
Action item tracking	Manual / None	Automated NLP extraction	Full gap — must build
Meeting quality scoring	Not available	Algorithmic 0–100 score	Full gap — must build
Recurring issue detection	Manual memory	AI-based pattern matching	Full gap — must build
Analytics dashboard	No system exists	React web dashboard	Full gap — must build
Data storage	Files, email threads	MongoDB database	Partial gap — needs migration
User authentication	Not applicable	JWT-based login system	Full gap — must build

2 Risk Register

Risk	Likelihood	Impact	Mitigation Plan
NLP accuracy too low for action item detection	Medium	High	Test with diverse meeting styles; tune keyword patterns iteratively
Scope creep adding features mid-build	High	Medium	Strict MoSCoW prioritisation; freeze scope after Phase 1 sign-off
User adoption resistance	Low	Medium	Simple UI design; show immediate time savings to users in demo
Data privacy concerns from companies	Medium	High	Implement end-to-end encryption; document data handling policy clearly
Timeline overrun during development	Medium	Medium	Use Agile sprints with weekly milestones; cut Nice-to-Have features first
